

IT Service Desk — Incident Resolution Report

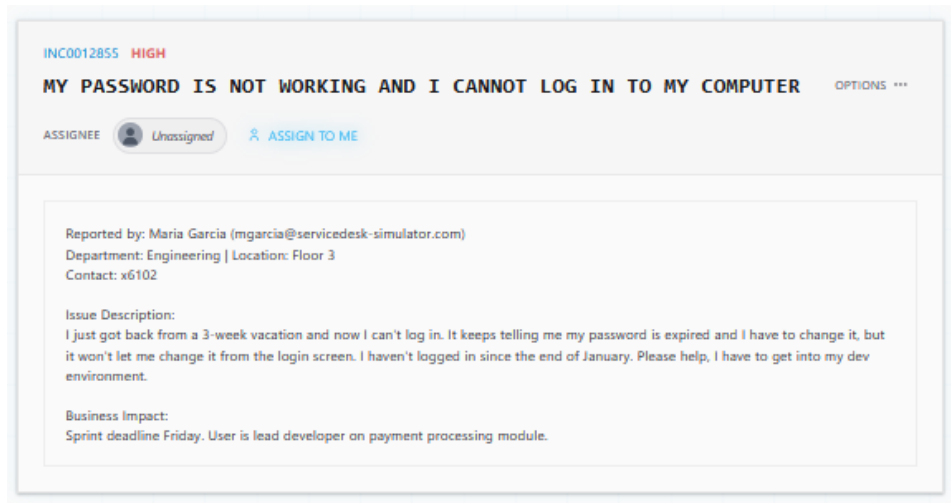

Incident INC0012855

Ticket Summary

Ticket ID	INC0012855
Priority	High
Subject	My Password Is Not Working and I Cannot Log In to My Computer
Reported By	Maria Garcia (mgarcia@servicedesk-simulator.com)
Department / Location	Engineering — Floor 3
Contact	x6102
Status	Resolved / Closed

Issue Description

The user returned from a three-week vacation and was unable to log in. The system reported that her password had expired and prompted her to change it, but the login screen would not allow the change to go through. She had not logged in since late January.

The screenshot shows a service desk ticket interface. At the top, the ticket ID 'INC0012855' is in blue and 'HIGH' is in red. Below this is the subject line 'MY PASSWORD IS NOT WORKING AND I CANNOT LOG IN TO MY COMPUTER' in bold black text, followed by an 'OPTIONS ***' link. Under the subject line, there is an 'ASSIGNEE' section with a user icon and the text 'Unassigned', and an 'ASSIGN TO ME' button with a plus icon. Below this is a large text area containing the following information: 'Reported by: Maria Garcia (mgarcia@servicedesk-simulator.com)', 'Department: Engineering | Location: Floor 3', 'Contact: x6102', 'Issue Description: I just got back from a 3-week vacation and now I can't log in. It keeps telling me my password is expired and I have to change it, but it won't let me change it from the login screen. I haven't logged in since the end of January. Please help, I have to get into my dev environment.', and 'Business Impact: Sprint deadline Friday. User is lead developer on payment processing module.'

Figure 1 — Original ticket INC0012855

Business Impact

The user is the lead developer on the payment processing module, with a sprint deadline on Friday. Continued lockout would put that deadline at risk.

Account Diagnostics

- Located Maria Garcia's account (username: mgarcia) in the Directory, Authentication tab.
- Confirmed MFA status: Enrolled.
- Confirmed Password Expired status: Yes — consistent with the reported symptom.

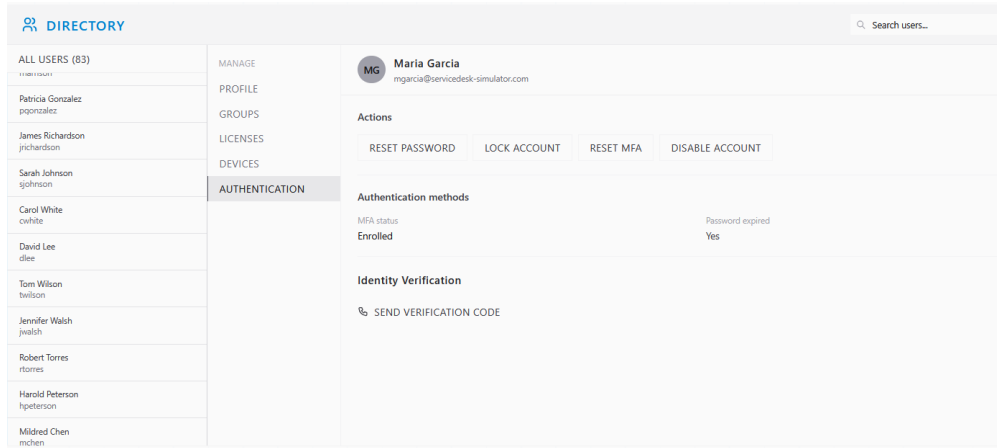

Figure 2 — Directory: Authentication tab for mgarcia

Actions Taken

- Used the Reset Password action on the user's Authentication page to generate a temporary password (user set to change it on first login).
- Delivered the temporary password to the user via Team Chat rather than email, since the user was locked out of her account.
- Instructed the user to change the temporary password immediately after logging in.
- User confirmed via Team Chat that the temporary password worked, that she was able to log in, and that she changed the password successfully.

Resolution

Resolution notes (as entered on ticket close):

"Used Safe Mode with Command Prompt to activate the Administrator account and reset the password."

The user regained access and confirmed the issue was resolved. The ticket was closed as resolved.

Note on Documentation Accuracy

The resolution notes entered on ticket close ("Used Safe Mode with Command Prompt to activate the Administrator account") do not match the steps actually performed, which were a directory-based password reset followed by delivery of the temporary password via Team Chat. It is recommended the resolution notes be corrected to reflect the actual steps taken, for audit accuracy.
